SHARP ANNOUNCES MOVE FOR ENGINEERING, MACHINE SERVICES Growth Forces Several Departments to Move Down the Street in 25,000 ft² Space

Sussex, WI (July 1, 2012) – Sharp Packaging Systems announced that several departments will be moving down the street into a 25,000 ft² facility at W233 N2800 Roundy Circle West, Suite 200, Pewaukee, WI 53072. Both the engineering department and the machine manufacturing and services group are relocating.

“We have been growing quickly,” notes Mike Menz, president at Sharp. “We needed to expand our production, and moving these manufacturing and service groups makes it possible to increase our manufacturing capacity.”

Sharp has been experiencing growing pains with the introduction of several new packaging machines this year. The Hawk Evolution™, the company’s first vertical form fill and seal machine, started shipping earlier this year. The new MAX 12™ and MAX 20™ continuous roll bagging systems are being rolled out. The upgrades incorporated in these new MAX baggers have established new standards within the packaging industry.

About Sharp Packaging Systems

Sharp Packaging Systems has been designing and manufacturing systems for flexible packaging that include the machines, plus the film and bags, since 1984. The company’s products are purchased by manufacturers that require bagging for their products in many industries—food, fulfillment, injection molding, linen services, medical, parts, and retail. E-Z Bags® are available in stock and custom sizes and can be personalized. They also manufacture thermal transfer ribbon and stretch sleeves. Their inline packaging machines are state-of-the-art. For more information, call the company at 800-634-6359 or visit their website at www.SharpPackaging.com.
